

Borough of Chambersburg

*A full service municipality in Franklin County
celebrating over 65 years of consumer owned natural gas service
over 120 years of community electric and a
regional wastewater, water, and municipal solid waste utility*

Borough of Chambersburg Water Customer,

The Borough of Chambersburg Water Department needs your help to remain in compliance with new federal DEP regulations. Please help us by identifying the material of your water service line. The water service line is usually located in the basement or close to the water meter. For most customers, the service line could be one of following types of materials; **copper/brass, plastic, galvanized steel, or lead**. **Copper/brass** lines will be the color of a penny and a magnet will not stick. A **plastic service line (PVC)** is made from a synthetic plastic polymer. A **galvanized** service line will be a dark metallic color, difficult to scratch, and a magnet will stick. A **lead** service line will be a dull silver-gray color, easily scratched leaving a shiny appearance, and a magnet will not stick.

Please locate the service line, scratch a small area of the pipe to expose the material, and use the above description to identify the material your service line. If able, please scan QR Code in bottom right of this handout, or text a photo, description of your water pipe, and your address to (717) 261-6580 or email the same information to watersli@chambersburgpa.gov. If you need further assistance contact (717) 352-7450 to set up an appointment.

Thank you,

Chambersburg Borough Water Department
