

Week of October 23, 2017

Significant progress has taken place at the site of what has been named the Chambersburg Aquatic Center!

The concrete in the main activity pool has been completed by a shotcrete method (sprayed, wet-mortar mix), and concrete has also been poured to form the Splash Pad.

Sitting in the foreground of the beautiful fall backdrop is the early excavation of the Leisure Pool which will include the water playground and lazy river.

The baby pool is now complete as well!

The Event Room roof is on, and the extension off the central office area will become a Lifeguard Station so that they may be available to assist patrons as needed when not on the stand.

Let the concrete pouring of the upper deck begin!
